

MARINA UTILITIES – WATER, SEWER, ELECTRIC, FIRE PROTECTION

NAPLES HAMILTON HARBOR, FL

PROJECT DESCRIPTION: Naples Hamilton Harbor is certified as a Clean Marina [™] under the State of Florida's and Department of Environmental Protection's Clean Marina Program. Marina Utilities provided marina systems – water, sewer and fire protection with leak proof HDPE piping and the highest grade stainless steel brackets and connections to allow clean, non-degrading and sustainable marina operation.

The firm provided consultant services for the boat storage facility, including fire walls, barrier walls and unique individual stack slip sprinkler system. At Hamilton Harbor wet slips are for vessels up to 60', and fixed and floating docks include convenient and environmentally friendly dockside pump out available at every slip. The construction of the marina project included adding new slips and the use of naturally strong docking that did not require special, potentially toxic preservatives and a complete reconstruction of the seawall allowing it to be submerged during high tide, thus eliminating restriction of natural water flow. www.hamiltonharboryachtclub.com
