

MARINA UTILITIES – WATER, SEWER, ELECTRIC, FIRE PROTECTION

RYBOVICH MARINA, WEST PALM BEACH, FL

PROJECT DESCRIPTION: Rybovich Marina, in West Palm Beach, FL, is a 12 acre deep slip, megayacht facility and full service boatyard, with floating concrete docks and slip service for yachts up to 300 feet in length with a 16 foot draft capability. Rybovich Marina is the largest transient dock in Florida with the latest in slip, high speed fueling and modern electrical service. Marina Utilities provided marina systems to the \$100 million, multi-phased renovation. Phase I overhaul to the marina's service-and-repair facilities added service slips and facilities designed to accommodate vessels up to 275 feet, in addition to existing slips that handle yachts up to 175 feet. The new slips offer convenient, modern power capabilities including 480V, 240V and 208V electrical service. Phase II includes 5,200 linear feet of new floating and fixed docks and feature the identical high-speed fueling and electrical services offered in the service slips. Phase III adds an additional 9,300 linear feet of docks including dining and retail to this yacht-centered resort. <http://www.rybovich.com/Marina.aspx>
