

MARINA UTILITIES – WATER, SEWER, ELECTRIC, FIRE PROTECTION

TURKS AND CAICOS YACHT CLUB ECOMARINA

PROJECT DESCRIPTION: Located in the Turks and Caicos Islands, British West Indies within a \$400 million international luxury yachting destination resort, The Turks and Caicos Yacht Club Eco-Marina has 110 slips and is a deep water eco-marina for yachts and megayachts up to 200 feet. Marina Utilities provided the design and installation of key environmentally sound eco-marina features, including the design and installation of water, sewer, separate unique bilge pumpout and fire protection systems, using technologically advanced utility and monitoring systems.

Pump-out systems are provided at every slip, and advance monitoring signals when the systems should be used. Slips have fixed, lighted, high-end, durable full service pedestals providing every level of electrical service, pure drinking and bathing water, telephone and cable television. The latest in technology for marina fire control integrally installed within the floating dock system is augmented by cabinet-mounted ABC fire extinguishers equally-spaced along the floating docks. <http://www.igy-turksandcaicos.com/marina/overview/>
